

ONLINE TRAINING

Within the Pharmaceutical, Biotech, R&D, Blood, Medical Device and regulated industries training is an absolute regulatory requirement. Each organisation must be able to demonstrate the competency of its staff to deliver their roles. During regulatory inspections, training records and competency are easily inspected and very often a source of inspection findings for the FDA/MHRA.

Training courses are provided in three formats, these being:

- **Online Training**
Accessed over the internet using desktop computers, laptops, tablets and smartphones.
- **Open Forum Course**
Held across various locations, with multiple company attendees, allowing excellent networking opportunities.
- **In-House Course**
Held at a convenient location, tailored to meet the specific needs of your organisation, allowing you to work through real issues in the privacy of your own team.

Our courses update you of current regulations, guidance and regulatory expectations. They aim to improve your internal procedures, leverage change and to deliver more compliant operations. In addition, effective training can deliver significant business value, by increasing the effectiveness of your staff for day to day operations and leveraging new techniques for new projects.

C ost	online training allows for a greater volume of training, making us more effective and compliant. It saves on time taken out to learn, in travel and accommodation costs.
L ocation	it can be done anywhere in comfort, taking away the difficulty of getting everyone in the same place.
A ttainable	online training is flexible, trainees will feel satisfied that they have gained knowledge and understanding and upon successful completion a certificate of their achievement can be downloaded.
R eliable	online training delivers consistent content and can give immediate feedback through regular assessments to evaluate learning.
I nfluence	our online training courses are designed for organisations, new starters and existing staff, improving knowledge and reinforcing a quality and coherent culture within organisations.
T ime	completed at a time that fits with the individual's schedule.
Y ours	trainees simply login and start learning – wherever and whenever they like. If needed, tutor support is just a call or email away.

Our Expertise

Our training courses have been designed by leading experts who have a practical understanding of working in the industry. Tutors are carefully selected based not only on knowledge and experience but also their ability to communicate that knowledge in an inspiring, interesting, structured and educational way.

We have a very wide range of existing pharmaceutical customers, small and large, and benefit from a great deal of repeat business from existing clients. We also focus on who the audience is – offering different styles of delivery and content depending on who we are training. This has resulted in superb feedback from all organisational levels.

clarity

compliance solutions

Our online training courses help you and your personnel:

- Keep up to date with current regulations, guidance and regulatory expectations
- Reduce your risk profile through greater subject knowledge and approaches to risk assessment.
- Deliver cost effective internal training through “Train the Trainer” programs
- Deliver higher levels of compliance and reduced regulatory inspection risk through enhanced staff competencies
- Deliver business value through more effective day to day operations

Hosting

There are three main hosting options, these being:

1. We host the training course and provide the administration
2. We host the training course and the client provides the administration
3. We provide the training course file, for the client to host on their Learning Management System (LMS)

Our online training courses include:

Online Data Integrity

Aimed at organisations, new starters and existing staff, as part of the ongoing Data Integrity training. The course provides an overview of Data Integrity threats and issues posed within paper and electronic systems and how to comply with regulatory requirements and expectations.

Online Good Manufacturing Practice (GMP)

Aimed at organisations, new starters and existing staff as part of their ongoing GMP training. The course provides a detailed overview of why we have GMP and what GMP is in three CORE chapters with additional chapters covering specific GMP requirements for different parts of the site.

Online Good Distribution Practice (GDP)

Aimed at organisations, new starters and existing staff as part of their ongoing GDP training. The course provides a detailed overview of why we have GDP, what GDP is and an overview of its main requirements.

Pharma Quality Management Systems module

Aimed at busy professionals working in the Pharma industry who need to understand how a forward thinking modern Pharmaceutical Quality Management System can add real-value to their organisation. It is of value to any Quality Professional, especially those working in QA and QC roles, as the course provides an eye-opening view of modern quality management thinking.

QP Quality Management Systems module

Aimed at any trainee Qualified Person (QP) as it meets the UK QP Study Guide requirements. Also of value as part of Continuous Professional Development (CPD) for existing QPs, especially those who need an update on more recent thinking with regards to Quality Management Systems. It is of value to any Quality Professional, especially those working in QA and QC roles, as the course provides an eye-opening view of modern quality management thinking.

Tailoring and Customising Online Training Courses

We are able to tailor and customise online courses to meet client's specific requirements. This could include simply adding a corporate logo, making reference to any relevant documentation, such as policies or procedures. Clients may determine the entire course topic and commission the development of a custom online course.
